Forms

(Bootstrap)

Bootstrap

(Forms)

- You can create responsive and consistently styled forms with Bootstrap
- Bootstrap apply some global styling on form controls such as textual `<input>`, `<textarea>` and `<select>` elements with class `.form-control` and have a width of 100%
- Bootstrap provides two types of form layouts:
 - Stacked (full-width) form
 - Inline form

Bootstrap

(Forms - Classes)

Class	Description
.form-inline	To display elements as inline-block and left-aligned
.form-group	To group the controls
.form-control	Text inputs - can be a text, password, date, time etc.
.form-control-file	For file upload
.form-check	Container class for checkbox and radio button
.form-check-input	For checkbox and radio button input control
.form-check-label	Label for checkbox and radio button
.form-check-inline	To display checkbox and radio inline
.form-text	For help text

Bootstrap

(Forms - Classes)

Class	Description
.form-row	To group controls in a row
.col-form-label-{size}	For label sizing (sm, lg)
.form-control-{size}	For control sizing (sm, lg)
.col-auto	Columns only take up as much space as needed
.sr-only	To hide labels (Only screen readers will read)

Bootstrap

(Forms – Stacked form)

- Since Bootstrap applies display: block and width: 100% to almost all form controls, forms will by default stack vertically

Bootstrap

(Forms – Inline form)

- Use form-inline, form-check-inline, radio-inline etc to display inline forms

Bootstrap

(Forms – Grid)

- The complex forms can be built with grid classes
